# Pathly - checkout monitoring

User and installation guide of the PrestaShop module. For PrestaShop 1.7.7 to 9.

*Pathly watches the path. Ping if it's up. Flow if a user can walk it. Chain if the services behind it hold.*

**The module is free. It connects to a Pathly account: the Solo plan is free, without a credit card. Paid Pathly plans are a separate subscription (prices in your Pathly account).**

## 1. What the module does

- **Ping**: once connected, Pathly checks every 5 minutes that the shop answers. A Ping already created for the shop is attached, never duplicated.
- **Flow of the checkout, prepared by Lumi**: Lumi, the Pathly assistant, recognises PrestaShop and prepares the Flow: add a product to the cart, then go up to the payment page. Each proposed Flow is replayed before it is shown. You validate it in one click.
- **Replay after an update**: when PrestaShop or a module is updated, Pathly replays the Flow.
- **Dashboard widget**: status of the Ping and the Flow, date and screenshot of the last failure, plan and quotas.
- **Availability badge** in the footer, linked to your public status page. Off by default.

## 2. Requirements

| | |
|---|---|
| **PrestaShop** | 1.7.7 to 9 |
| **PHP** | 7.2 or later, as supported by your PrestaShop version. Extensions curl and json. |
| **Outgoing HTTPS** | The shop must reach `https://api.pathlyhq.com`. No other address is called. |
| **Public shop** | Pathly visits the shop from the internet: a shop in maintenance mode, behind a password or on a local address cannot be watched. |
| **Pathly account** | Free Solo plan, without a credit card. |

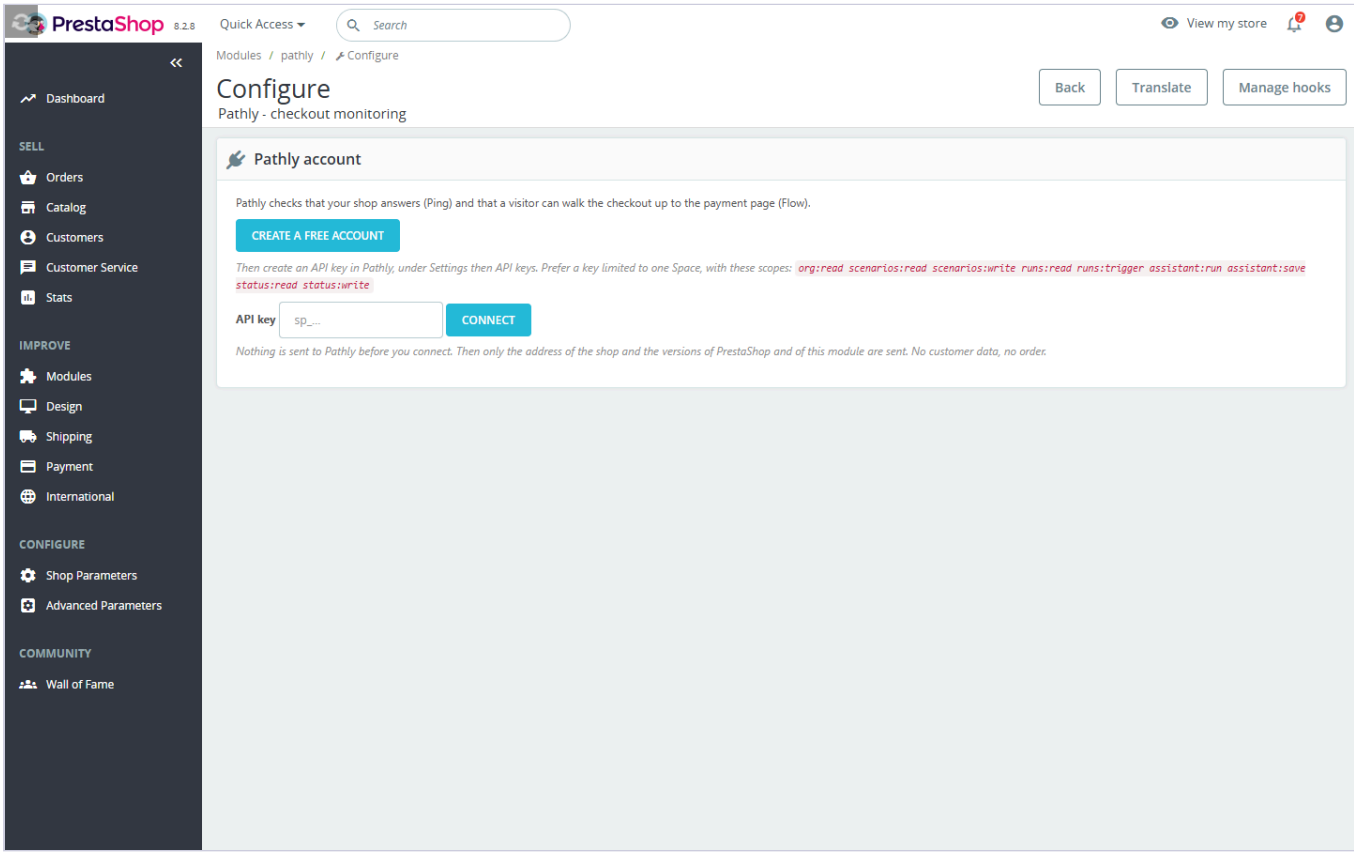

## 3. Installation

1. In the back office, open **Modules > Module Manager**, click **Upload a module** and choose `pathly.zip`.
2. Click **Configure**.

Only an employee with the SuperAdmin profile sees the settings page and the widget.

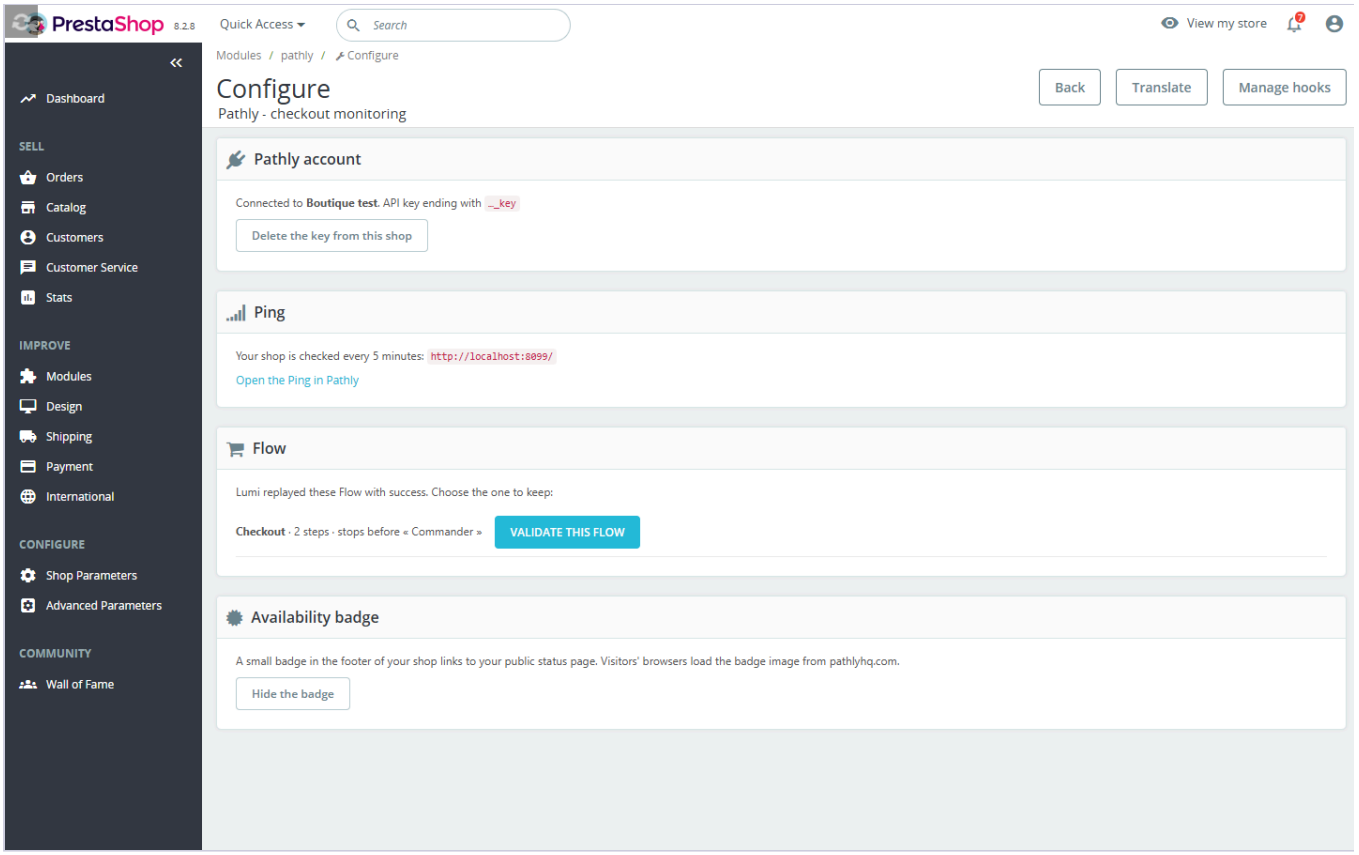

## 4. Connection

1. No account yet? Click **Create a free account**.
2. In Pathly, open **Settings > API keys** and create a key, preferably limited to one Space, with the scopes `org:read scenarios:read scenarios:write runs:read runs:trigger assistant:run assistant:save status:read status:write`.
3. Paste the key in the module and click **Connect**. The module checks it with Pathly. A refused key is not saved. The key is stored encrypted with the shop secret and never displayed again.
4. The Ping of the shop is created, or the existing one is attached.

## 5. Checkout Flow with Lumi

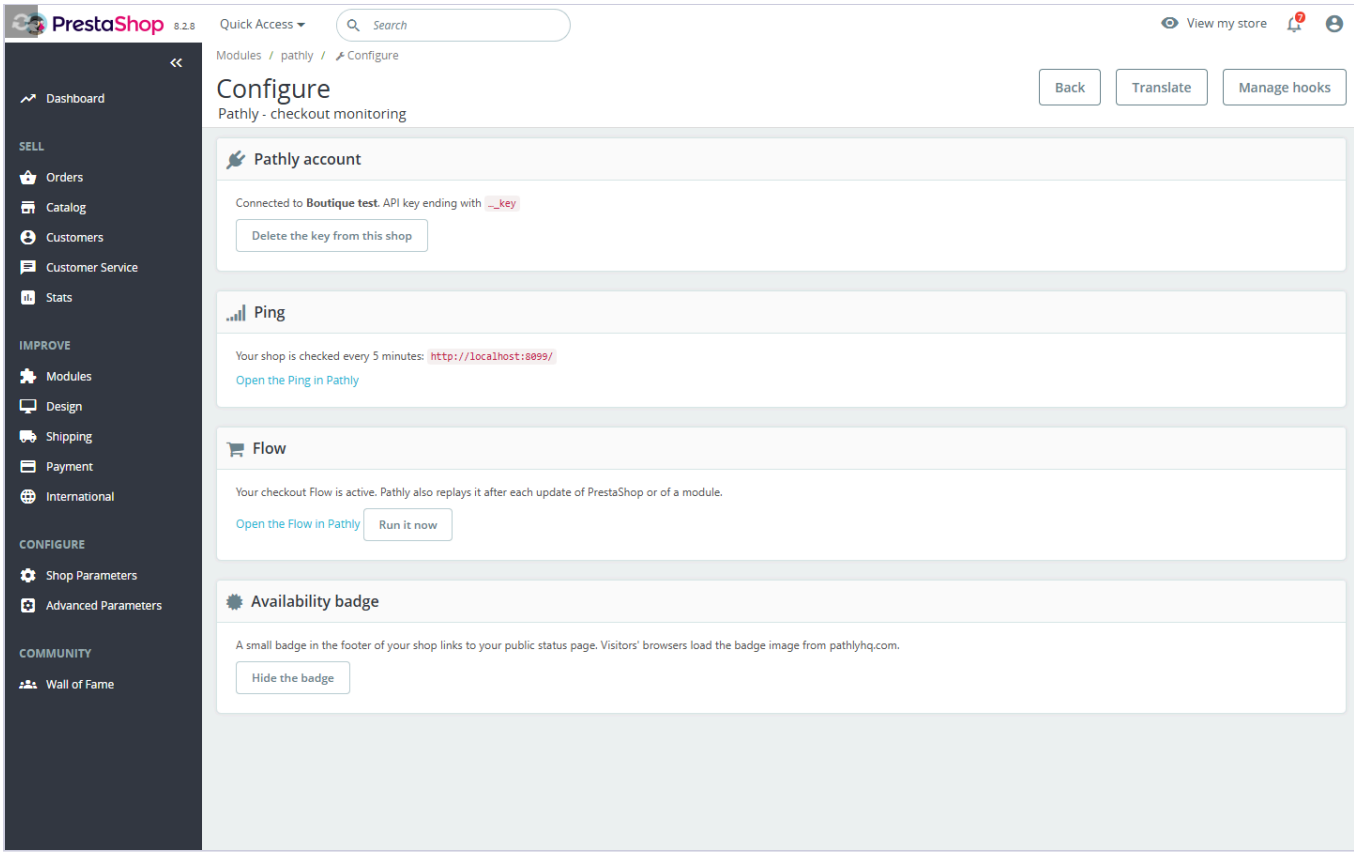

1. Tick **I manage this shop and allow Pathly to browse it.**, then click **Prepare the checkout Flow with Lumi**.
2. Lumi explores the shop for about two minutes. The page refreshes by itself.
3. Validate the proposed Flow. Pathly runs it at once, then on its schedule.

> Lumi never pays, never sends a form and only types test values. Each run of the Flow creates a test cart on the shop: it can trigger your abandoned-cart reminders and appear in your cart statistics. Exclude the test address and name from these tools.

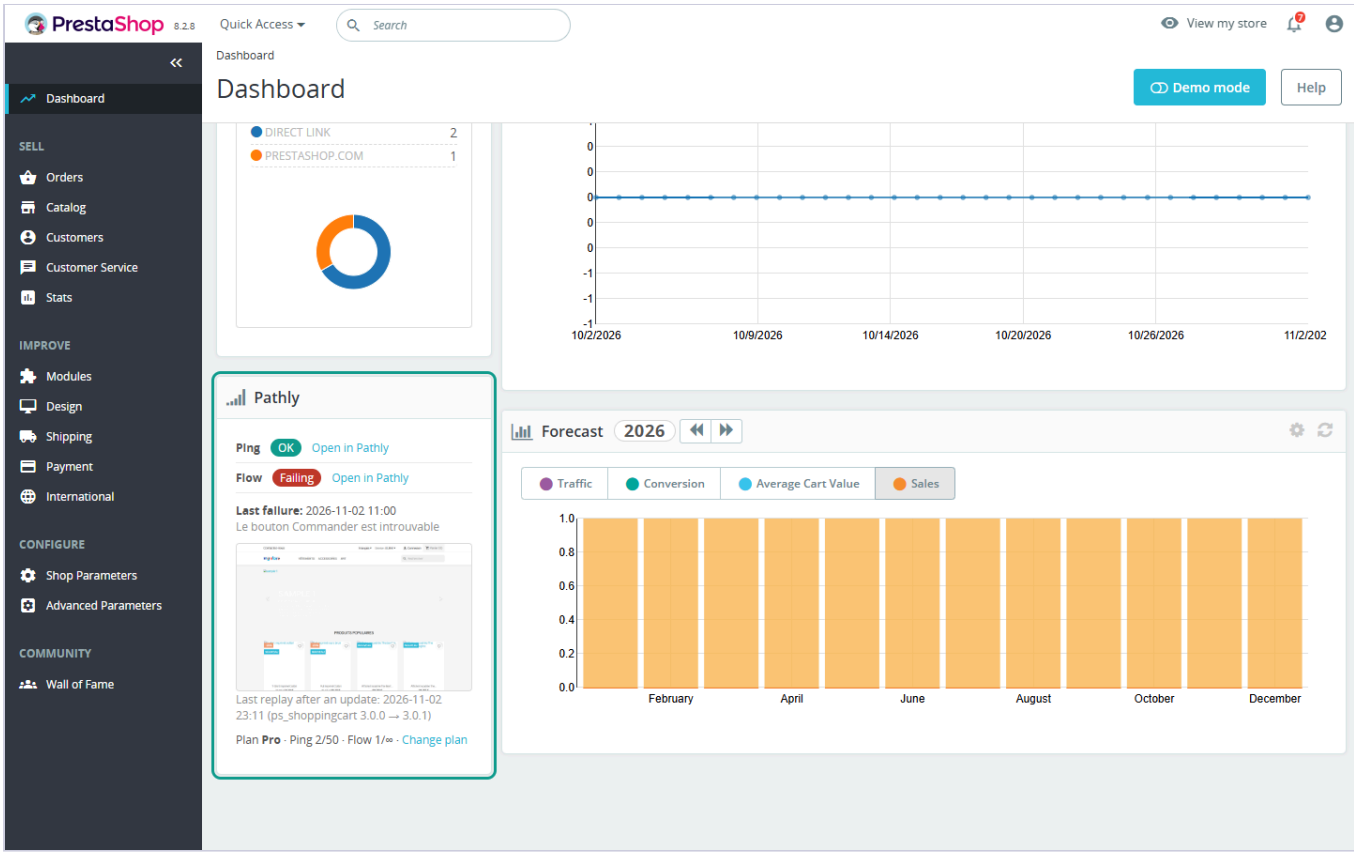

## 6. Replay after an update

PrestaShop 9 signals module updates with the `actionModuleUpgradeAfter` hook, PrestaShop 8 with `actionBeforeUpgradeModule`. On every version, the module also compares the installed versions of PrestaShop and of the modules, at most every 5 minutes, when an administrator opens the back office. Two replays are at least 10 minutes apart. The button **Run it now** starts a replay by hand.

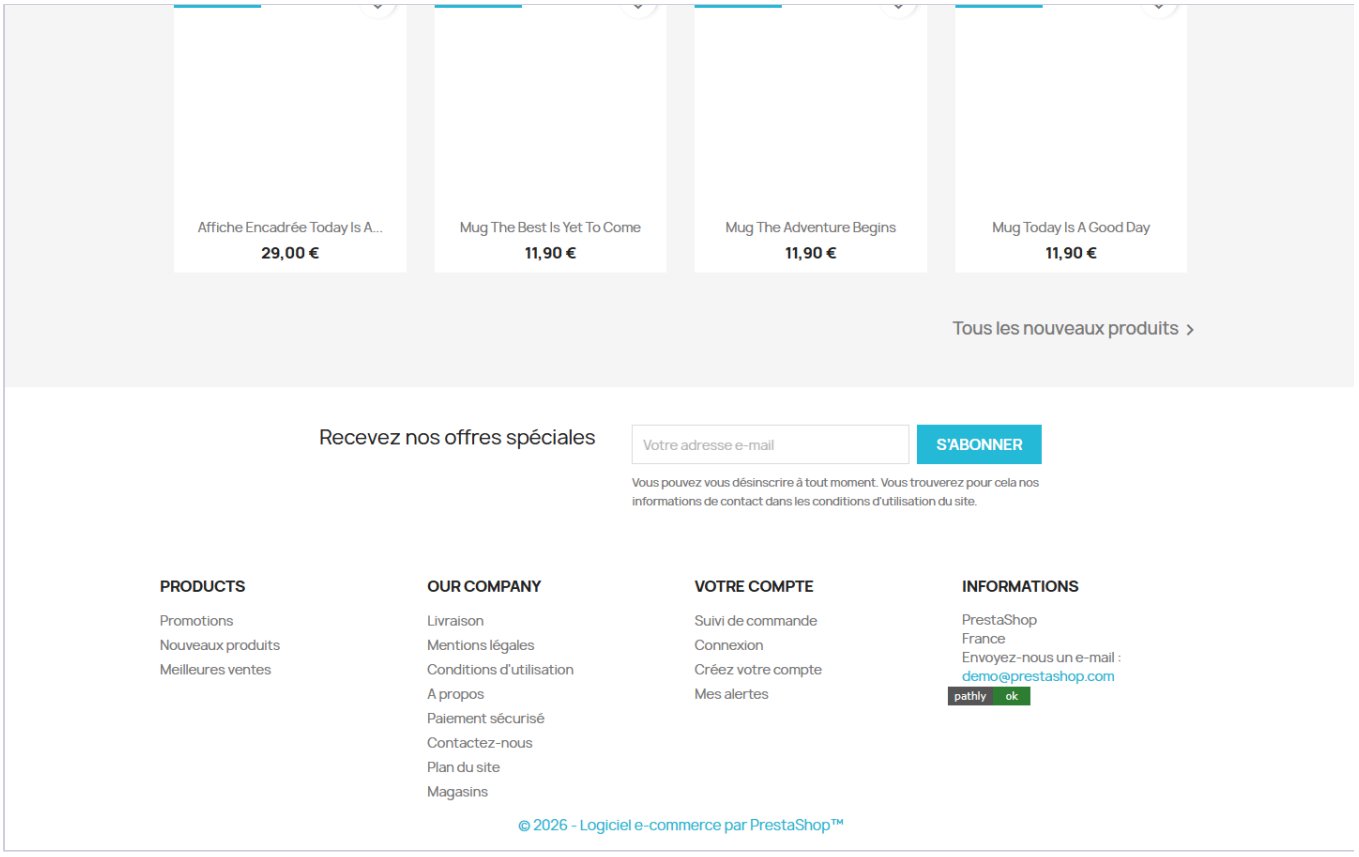

## 7. Dashboard widget

On the back office dashboard: status of the Ping and of the Flow, date and screenshot of the last failure, last replay, plan and quotas, and links to Pathly.

## 8. Availability badge

Off by default. Click **Show the badge**: Pathly publishes a status page, and a small badge in the shop footer links to it. The browsers of your visitors then load the badge image from the Pathly servers: mention it in your privacy policy. Click **Hide the badge** to remove it and unpublish the page.

## 9. Data and privacy

- Nothing is sent to Pathly before an administrator saves an API key.
- Then only the address of the shop and the versions of PrestaShop and of the module are sent. No customer data, no order, no list of modules.
- Pathly runs on Google Cloud, region europe-west1 (Belgium). The terms of service, the privacy policy and the data processing agreement are on the Legal pages of the Pathly site.

## 10. Uninstall

Uninstalling deletes every setting of the module from the shop. Your Ping and Flow stay in your Pathly account, where you can delete them.

## 11. Troubleshooting

| | |
|---|---|
| **Pathly refused this API key** | Check that the key is active, not revoked, and has the scopes listed above. |
| **Pathly cannot reach your shop** | The shop must be online, out of maintenance mode, on a public address. |
| **Pathly cannot be reached from your server** | The server must allow outgoing HTTPS to api.pathlyhq.com. |

| | |
|---|---|
| **Lumi does not find the checkout** | Record the Flow yourself in Pathly, without code. |
